INTRODUCING JAPANESE FOOD "FUGU(PUFFERFISH)"

Generally, pufferfish is well known as fish which has the poison tetrodotoxin. But pufferfish is treated as one of the most luxury foodstuff in Japan. The reason why pufferfish has poison is they accumulate the poison from their food which has poison. This is the leading opinion at the moment. In Japan, you need the license to cook pufferfish.

In 1880's, Ito Hirobumi who is the first Prime Minister of Japan ate pufferfish in Yamaguchi prefecture, he was very impressed with its taste, and permitted to eat it. Nowadays, there are many dishes such as sashimi (sashimi of pufferfish is called "Tessa"), pot dish (pot dish of pufferfish is called "Tetchiri") and so on.
